ALUMINIUM

# Cable channel 30/40

For quick, safe and easy installation of LED channel letters

**On request:**  
made to measure,  
powder coated  
or anodised

Every time you attach brand new channel letters to the wall, neatly and safely hiding the cabling is a time-consuming job. **Do you recognize this?**

With this aluminium cable channel you are able to hang LED channel letters **quickly, efficiently and safely.**

### Prevents dangerous situations

The cable channel is mounted onto the back of the channel letter and offers you the option of connecting cables and then neatly concealing them immediately. This prevents (possibly) dangerous situations in which cabling is not properly concealed, resulting in malfunctions and in the worst case: fire.

### Sliding anchors

You fix the cable channel onto the wall or construction with sliding anchors (anchors 80 mm wide and 8,5 mm pre-drilled). The anchors are slidable, so you can easily move them to the most ideal spot on the wall for drilling. In addition, this way you can optimally 'hide' the anchors behind the channel letters.

Depending on the text height, you can use one or more cable channels one above the other.

### Available from stock

The cable channels are available from stock in 30 and 40 mm, at standard length of 6.100 mm in mill finish version (untreated).
